

DRINKWATER

Atlas Pig

Flexible pig designed to compress, adapt, and keep moving

Built to Bend. Ready to Recover.

Atlas Pig is a high-flexibility solid pig built to perform where other pigs fail. Its shape-memory construction allows it to compress through tight restrictions (up to 50% of its diameter!), and return to form once released. With minimal bypass, Atlas Pig helps displace liquids and debris while maintaining a reliable seal. It can be propelled by gas or liquid and withstands high pressure, making it ideal for complex pigging scenarios and sour service applications.

HOW IT WORKS

- Compresses up to 50% to pass through restrictions and diameter changes
- Returns undamaged to original size and shape once through
- Effectively sweeps multidiameter lines without losing hydraulic seal
- Operates in systems pressurized up to 8,700 PSI
- Compatible with gas or liquid propulsion and CEFAS approved

WHERE IT WORKS

- Pipelines with internal diameter transitions or changes
- Systems with no launcher/catcher facilities
- Coiled tubing systems
- Lines with wax, debris, or scale build-up
- Subsea or high-deformation pipeline environments

**See our full line
of chemicals**

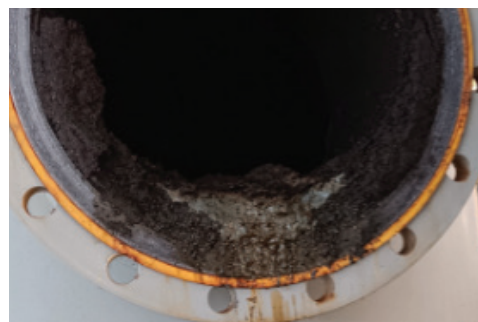

Drinkwater offers a complete line of chemical solutions that work in conjunction with your pigs to boost efficiency, remove debris, prevent corrosion, and extend the life of your pipeline. Our tailored solutions help make every pigging run cleaner, smoother, and more effective.

ATLAS APPLICATIONS:

- Unpigable Lines
- Debris Removal
- Degassing
- Dewatering
- Deoiling
- Cleaning
- Rescue

AVAILABLE PACKAGING:

- Standard sizes based on common true ID sizing
- Custom options available upon request
