

DRINKWATER

Saf-C-H₂O[®] PL

Protecting pipelines from scale, corrosion, and biofouling

SAF-C-H₂O[®] PL APPLICATIONS:

Cleaning

Treat **Before** It Damages

Saf-C-H₂O[®] PL is a chemical treatment that renders seawater safe to use in pipelines. When seawater sits in a line, it can lead to internal damage, such as corrosion and fouling. An added layer of defense prevents damage, helping extend the life of your pipeline and protect your investment.

HOW IT WORKS

- Treats harmful seawater components that can cause corrosion
- Helps control the development of corrosion products and debris
- Provides strong anti-fouling protection to reduce risk of pipeline damage
- Flexible formula for short-term flushing or long-term defense

WHERE IT WORKS

- Seawater-flushed pipelines or wells
- Pipelines scheduled for decommissioning or abandonment
- Temporarily suspended pipeline systems
- Applications requiring corrosion or fouling protection prior to seawater use

AVAILABLE PACKAGING:

- **5-gallon pails**
(treats up to 100,000 gallons of seawater)
- **Drums and totes for larger volume operations**
